

Expedite!

CREDIT CARD PROCESSING MADE EASY FOR YOU AND YOUR PATIENTS

Expedite!, our comprehensive credit card processing software, helps practices easily manage credit card billing for patients. Using Expedite! eliminates the expense and complications involved in purchasing and managing a separate credit card system from a third party. Plus, Expedite! uses a secure Internet connection so there is no need to tie up a phone line or pay for a separate phone line.

FULLY INTEGRATED WITH HELPER

Available as an add-on module to Helper, Expedite! provides all the features and flexibility of superior credit card processing software in the context of the familiar Helper program.

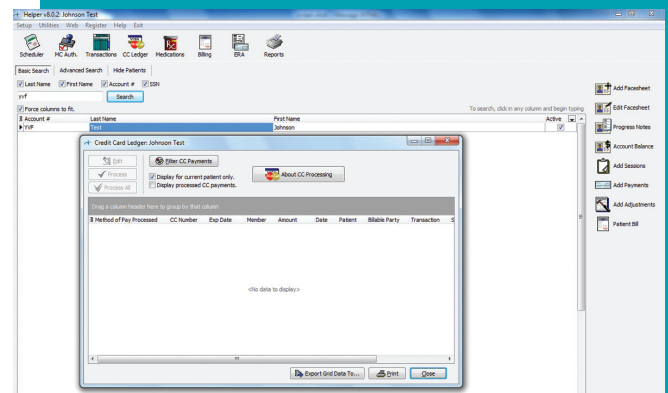

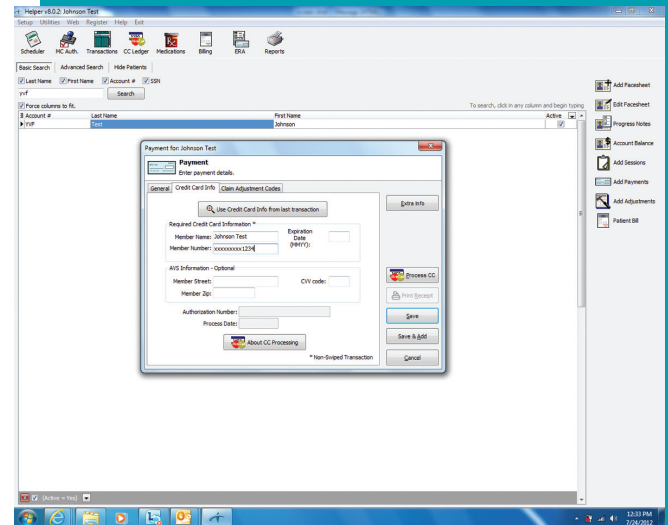

For efficient billing and revenue management, some practices request that patients authorize credit card billing in advance so that the practice can charge the patient's credit card as soon as insurance pays (or doesn't pay) for the appointment. The practice simply charges the patient's card that is stored in Helper and then sends the patient a notification of the charge in a zero balance statement.

BENEFITS TO PRACTICES

- Immediate approval of transactions
- Improved cash flow management
- Multi-user friendly, enabling an office to process transactions under single or multiple merchant ID numbers
- Supports on-demand or batch processing
- Simplifies financial reporting and tracking, with all transactions recorded on the practice's credit card and general ledger
- Allows use of credit card swipe machine

BENEFITS TO PATIENTS

- Provides an additional payment option
- Flexibility to pay with Visa®, Mastercard®, American Express®, or Discover®
- Minimizes time spent discussing payments
- Credit card information is stored securely and confidentially
