

InfoScriber

e-Prescribing for improved medication management and better patient care

OVERVIEW

InfoScriber is a secure, Web-based electronic prescribing and medication management system specifically designed for behavioral and mental health providers. InfoScriber can be used as an independent online prescribing system, or when integrated with Helper, the leading practice management system for private and small group practices, it becomes a key component of a complete solution for psychiatrists and prescribing professionals.

Imagine reaching into your desk drawer for a paper prescription pad. You have just completed a patient evaluation and are ready to prescribe a medication; yet you are confronted with questions about the patient, the medication, the dosage, etc.

- Do I have all the patient data I need to make an informed prescribing decision?
- What are the possible interactions and contraindications?
- How have my peers treated this diagnosis...or prescribed this medication?
- How will I know that this prescription reaches the pharmacy?

Now you can put away the old-fashioned prescription pad. InfoScriber equips you with the resources and tools needed to answer these questions at the point of prescribing -- in real-time. InfoScriber also provides an accurate, efficient e-prescribing system to transmit prescriptions electronically to the pharmacy of choice. A built-in customizable progress note feature enables you to complete notes and assessments electronically and associate them with specific medication orders and visits. And, InfoScriber produces numerous standard and custom reports to help you better manage patient care, reduce costs and streamline related administrative tasks.

BENEFITS

There are many benefits associated with using InfoScriber:

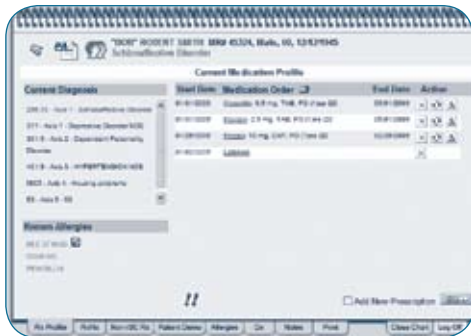

- Medication errors can be reduced and risk management efforts improved
- Medication history is available with a single "click" and can be sorted by medication, status or chronological date

"The combination of Helper and InfoScriber from Netsmart gives me everything I need to operate my practice, optimize my cash flow and provide quality care."

Richard M. Naimark, M.D.
Board Certified Psychiatrist
Chestnut Hill Counseling Associates.

To view a demo of InfoScriber software, visit www.helper.com/demo

- Patient medication compliance is improved with free online prescriber reports, including expiring medication orders, refill tracking, polypharmacy and dose range
- Enables prescribers to realize the financial incentives associated with e-prescribing requirements in medicare and other emerging legislation
- Current reports are specifically designed for CNS disorders with medication histories and outcomes
- Diagnoses are automatically integrated into the prescribing process (in DSM-IV and/or ICD-9 format) for an accurate and current medication record
- Includes a feature that memorizes prescribing patterns so that a user can look at common ways that medications are used to treat a diagnosis within a physician group or across the InfoScriber network of prescribers
- Features optional embedded intelligence to collect useful data on prescribing patterns, side effects, combination therapies and off-label uses of medications

process. Once registered, prescribers can begin using InfoScriber immediately, and any training and support needed is included with the purchase of a subscription.
