

# OrderConnect e-Prescribing

## Solution Overview

Imagine reaching into your desk drawer for a paper prescription pad. You have just completed a patient evaluation and are ready to prescribe a medication, yet you are confronted with questions about the patient, the medication, the dosage, etc.

- Do I have all the patient data I need to make an informed prescribing decision?
- What are the possible interactions and contradictions?
- How have my peers treated this diagnosis...or prescribed this medication?
- How will I know that this prescription reaches the pharmacy?

Now you can put away the old-fashioned prescription pad. OrderConnect™ e-Prescribing equips you with the resources and tools needed to answer these questions at the point of prescribing — in real time. OrderConnect e-Prescribing also provides an accurate, efficient e-prescribing system to transmit prescriptions electronically to the pharmacy of choice. And, OrderConnect e-Prescribing produces numerous standard and custom reports to help you better manage patient care, reduce costs and streamline related administrative tasks.

## Key Benefits

There are many benefits associated with using OrderConnect e-Prescribing:

- Medication errors can be reduced and risk management efforts improved
- Medication history is available with a single click and can be sorted by medication, status or chronological date

## Improved Medication Management and Better Patient Care

OrderConnect e-Prescribing is a secure web-based electronic prescribing and medication management system specifically designed for behavioral and mental health providers. OrderConnect e-Prescribing can be used as an independent online prescribing system. When integrated with Helper, the leading practice management system for private and small group practices, it becomes a key component of a complete solution for psychiatrists and prescribing professionals.

- Current reports are specifically designed for CNS disorders with medication histories and outcomes
- Patient medication compliance is improved with free online prescriber reports, including expiring medication orders, refill tracking, polypharmacy and dose range
- A built-in customizable progress note feature enables users to complete notes and assessments electronically and associate them with specific medication orders and visits
- Diagnoses are automatically integrated into the prescribing process (in DSM and/or ICD format) for an accurate and current medication record
- Includes a feature that memorizes prescribing patterns so that a user can look at common ways that medications are used to treat a diagnosis within a physician group or across the OrderConnect e-Prescribing network of prescribers
- Features an optional embedded intelligence feature to collect useful data on prescribing patterns, side effects, combination therapies and off-label uses of medications

### Controlled Substance Prescribing

OrderConnect is also certified for electronic prescribing of controlled substances (EPCS). After a simple identity proofing process and training, prescribers can send their controlled substance orders over the internet to pharmacies. A Narcotics Addiction DEA number can be entered in order to enable the prescribing of Narcotics Addiction medications.

OrderConnect e-Prescribing is a user-friendly prescribing solution. Because it's web-based, there's no software to install. Once registered, prescribers can begin using OrderConnect e-Prescribing immediately. Any training and support needed is included with the purchase of a subscription.
